January 17, 2008

Dear House and Senate Colleagues:

It is our privilege to provide to you, with our highest recommendation, a complimentary copy of *Unstoppable Global Warming – Every 1500 Years*, by S. Fred Singer and Dennis T. Avery. Contributions from individuals and foundations (not corporations) made it possible for the Heartland Institute to provide copies of the book to distribute to you. It is very revealing with regard to the debate on global warming.

As you know, we have passed some significant global warming initiatives in the legislature and it appears some significant regulatory decisions are in the making based on some alleged widespread acceptance by the scientific world that global warming is caused primarily by industrial activity. If enacted, these measures could be extremely detrimental to the economy of our state and it would be especially ironic if the data used to justify them proves to be faulty.

This book deals with some recent findings based on solid scientific research about the history of global climate for thousands of years. Frankly, the scientific results take exception with some of the positions that we have heard for several years that have been based on computer modeling. The material, which is supported by a thorough listing of supporting research notes, is based on scientific analysis and investigation, not hype, fear, and evangelizing.

Who is right? We hope you will review the book and make up your own mind.

S. Fred Singer, a climate scientist, is among the top scientists in the world. He was the first director of the U.S. National Weather Satellite Service, served five years as vice chairman of the U.S. National Advisory Committee on Oceans and Atmosphere, and is the author of more than 400 technical papers in scientific, economic, and public policy journals.

Dennis Avery is an agricultural economist and Senior Fellow of the Hudson Institute. He has held positions with, and won distinguished service awards from, the U.S. Department of State and U.S. Department of Agriculture.

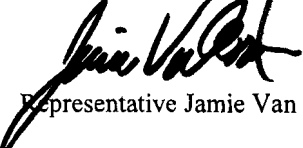

Sincerely,

Representative Ralph Watts

Representative Dwayne Alons

Senator Jerry Behn

Representative Chuck Soderberg

Representative Jamie Van Fossen
